

## Gas & Power Specifications

- Model: VRTIKL  
Vent: Vertical or Horizontal Termination  
Capacity: Heats 50m<sup>2</sup> on high (Average)
- Gas: Provide a crimped/capped off copper gas line to suit 60mj and locate 75mm above the floor behind the fireplace, to the left or right hand side. Note: No composite pipe to be used.
- Power: Provide a single non switch GPO/413 socket and locate close to the floor behind the fireplace to the opposite side as the gas.
- Flue: Vertical Termination - 170mm diameter flue. Ensure a clear path is made available through to the roof space and that termination clearances are met. This is a gas regulation and cannot be overlooked.
- Horizontal Termination – 205mm diameter flue. Ensure a clear path is made available through the wall and that termination clearances are met. This is a gas regulation and cannot be overlooked.
- Access: Scaffolding is required for all multi storey installations.
- Room Vents: Not required for Balanced Flue fireplaces.
